U.S. Census Bureau,  
American Community  
Survey, 2021 1-Year  
Estimates

**White workers are more than 3 times as likely as Hispanic/Latinx workers to be employed in high wage occupations.**

Note: For this indicator, high wage occupations were identified in previous reporting years as having annual earnings above \$65,000 in Tulsa. These include management, business and financial occupations; computer, engineering and science occupations; legal occupations; health diagnosing and treating practitioners; and other technical occupations. To ensure comparability across years, the 2022 Equality Indicators Report utilizes the 2021 American Community Survey (ACS) 1-year standard estimates rather than the 2020 ACS 1-year experimental estimates. \*The Census Bureau does not recommend comparing the 2020 ACS 1-year experimental estimates with our standard ACS estimates or the decennial census [...].\* (U.S. Census Bureau, 2021, <https://www.census.gov/newsroom/press-releases/2021/experimental-2020-ac-s-1-year-data.html>)
